Luna Bridge

SNE-SPIMS

Presentation Script — to memorise

Simple English • Parent → Teacher → Admin

Read the lines out loud. The grey lines are reminders of what to click.

OPENING ~20 sec

“Good morning, everyone. Today I will show you our website. It is called **Luna Bridge**. It is a system for a **special-needs school**.”

“Three kinds of people use it: **parents, teachers, and one admin**. They all use the same website, but each person sees different things.”

“Let me start from the **parent’s** side.”

■ *Show the login page, then log in as a parent (linda / parent123).*

1. PARENT DASHBOARD ~60 sec

“This is the **parent’s** dashboard. A parent logs in to follow their child.”

“At the top, the parent sees the **latest report** from the teacher. They click *View report* to read it. The report shows a short summary of the day, the child’s **mood**, and a few ratings. After reading, the parent clicks **Acknowledge** — this tells the teacher that they have seen it.”

“Below that is **Progress by area**. This shows how the child is doing in five areas, like communication and motor skills. These numbers come from the child’s learning goals.”

“On the right, there is a small **calendar** for this week. Busy days are marked. If I click a day, I can see what happens that day, like a therapy session.”

“The parent can also open **Messages** to chat with the teacher. If a parent has two children with the same teacher, the chats are **joined into one room**.”

“So for the parent, everything answers one question: **how is my child doing today?**”

2. TEACHER DASHBOARD ~70 sec

■ *Log out, then log in as a teacher (james / teacher123).*

“Now let me log in as a **teacher**.”

“The teacher’s dashboard is a **to-do list**. It shows how many students they have, and how many messages are unread. The most useful part is **Reports to write** — it shows which students still need a report.”

“The teacher clicks **Write report**, writes a short summary, picks a mood, gives a few ratings, and clicks **Publish**. The moment they publish, the **parent gets a notification**.”

“The teacher can also open a student to see the **IEP**. The IEP is the child’s **learning plan**. It has goals, and each goal has a **progress percent**.”

“The teacher can also schedule **therapy**. When they book a session, the system **checks for conflicts** — the same student, therapist, or room cannot be booked twice at the same time. If there is a clash, it stops you.”

“The teacher can also record a **behaviour incident** — how serious it was, and whether the parent can see it.”

“So for the teacher, this system is their **daily work tool**.”

3. ADMIN DASHBOARD ~45 sec

■ *Log out, then log in as the admin (admin / admin123).*

“Last, let me log in as the **admin**.”

“The admin sees the **whole school**. The dashboard shows numbers: total students, active IEPs, recent incidents, the number of teachers and parents, and therapy sessions this week.”

“The admin manages **students, user accounts, and announcements**. An announcement can be sent to **everyone, only teachers, or only parents**.”

“The admin does **not** join the private chats between parents and teachers. That is on purpose, to keep them private.”

“So for the admin, this system is a **control room** for the whole school.”

CLOSING ~15 sec

“So that is our system. **One website, three roles.** The parent follows their child. The teacher does their daily work. The admin runs the school.”

“And the data is kept **safe** — each person only sees what they are allowed to see.”

“Thank you. I am happy to answer your questions.”
